 24. A. genetic B. genes C. genetically D. genetics
 25. A. benefit B. impact C. advantage D. solution

VIII. Read the following passage and choose the correct answer to each of the questions.

A digital assistant is a computer programme which is designed to assist a user by answering questions and perform basic tasks. Digital assistants use advanced artificial intelligence (AI), natural language processing, natural language understanding, and machine learning to learn as they go and provide a personalized, conversational experience. Today, millions of individuals across the world who own computers, tablets or smartphones use at least a digital assistant. They also exist in cars, appliances, some smart TVs, and smartwatches. The first modern digital assistant installed on a smartphone was Siri, which was introduced as a feature of the iPhone 4S in October, 2011 by Apple Inc. Then, in 2014, Amazon introduced the Alexa voice assistant and Echo smart speaker. Six years after Siri, Bixby made its debut on the Galaxy S8 series. To interact with a digital assistant, you must use a wake word, which is a word or group of words your device uses to activate the digital assistant. Wake words include 'Alex', 'Hey Cortana', 'Hey Siri', etc. Once you've said the wake word, you can then ask the digital assistant a question, such as 'Hey Siri, what is the current temperature?' Digital assistants like Siri or Cortana are able to answer many general questions and offer recommendations based on a user's profile, past behaviours, and other information. Therefore, digital assistants bring convenience, free us to be more creative and innovative. You can spend more time on strategic ideas and complex activities, and less time on tedious tasks that are better handled by the assistants you will carry in your pockets. With continuing advances in AI, digital assistants are becoming 'smarter' – providing more natural conversations, answering more complex questions, and offering faster and more insightful recommendations.

26. What is a digital assistant?

- A. A technology that can respond to questions in different languages.
 B. A software that can carry out tasks for you based on your command.
 C. A programme that can understand personal conversations.
 D. A device that uses AI to perform a range of tasks.

27. When was Bixby first introduced?

- A. In 2011. B. In 2014. C. In 2016. D. In 2017.

28. In order to use a digital assistant, first _____.

- A. users activate the device B. users ask a general question
 C. users call out the wake word D. users interact with the device

29. The word tedious is closest in meaning to _____.

- A. boring B. exhausting C. normal D. physical

30. According to the passage, all of the following statements are true EXCEPT _____

- A. Digital assistants are available on a range of devices.
- B. Apple was the first to bring the digital assistant as a feature on smartphones.
- C. Thanks to digital assistants, we are free from doing tasks at home.
- D. In the future, digital assistants will become more complex.
